

# REPLWARE Case Studies

# Problem: Your department has several systems and several data formats.

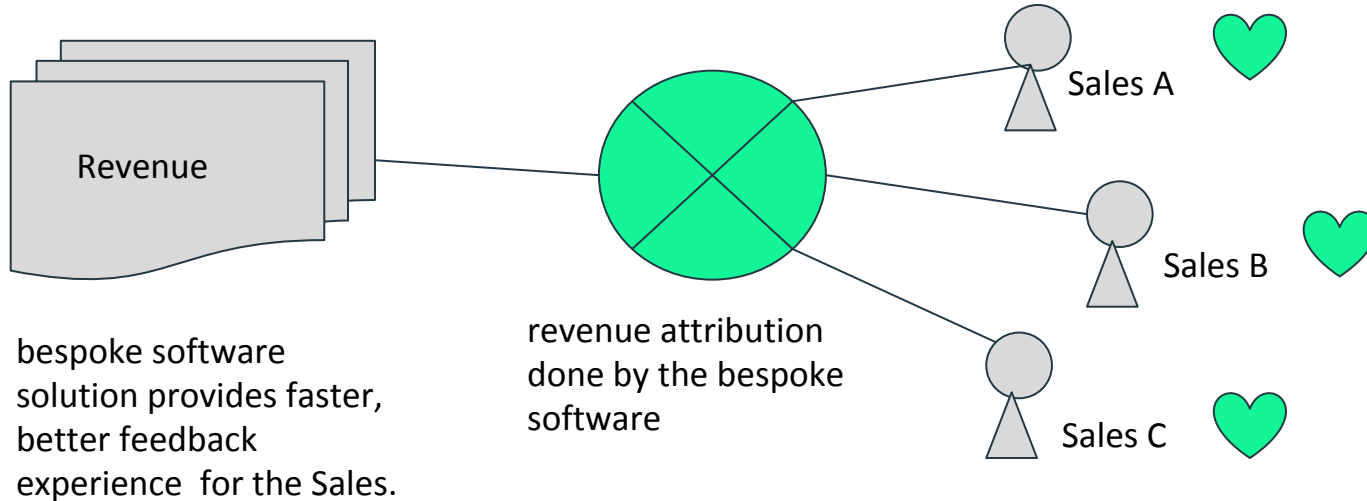

# Solution: Data integration by the bespoke software

# Problem: Your revenue attribution is done manually

# Solution: Your revenue attribution is done by the bespoke software

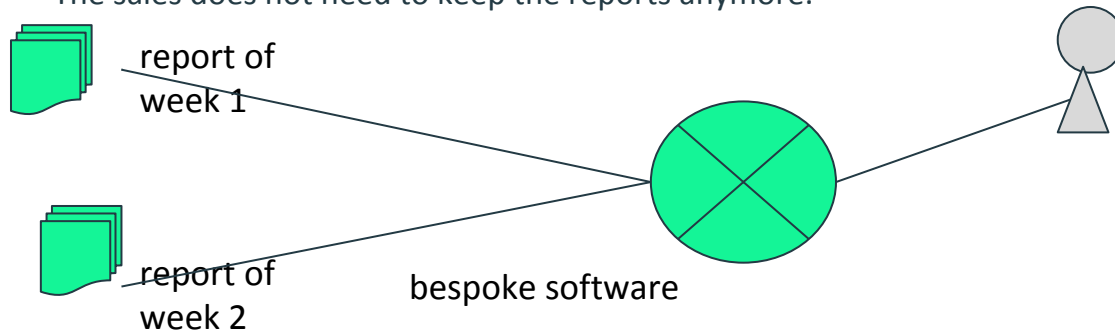

# Problem: Your sales people need to keep different versions of the report.

- Every week your BI team generates a new report for all the sales.
- The sales has to keep every version of the report.

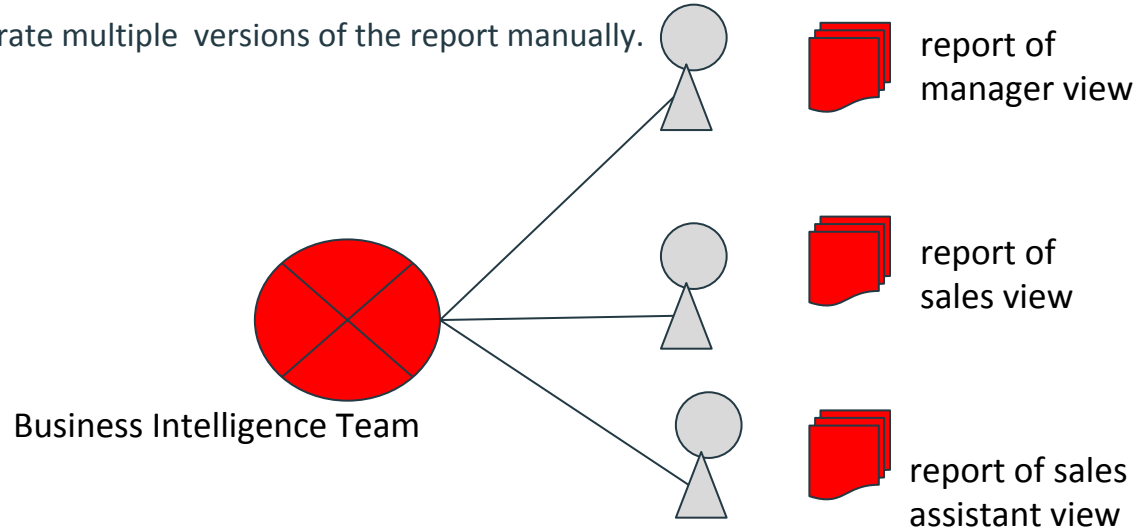

# Solution: Different versions of the report provisioned by the bespoke software.

- The sales can retrieve different versions of the report directly from the bespoke software system anytime.
- The sales does not need to keep the reports anymore.

# Problem: Your BI team needs to manage different authorizations of the report.

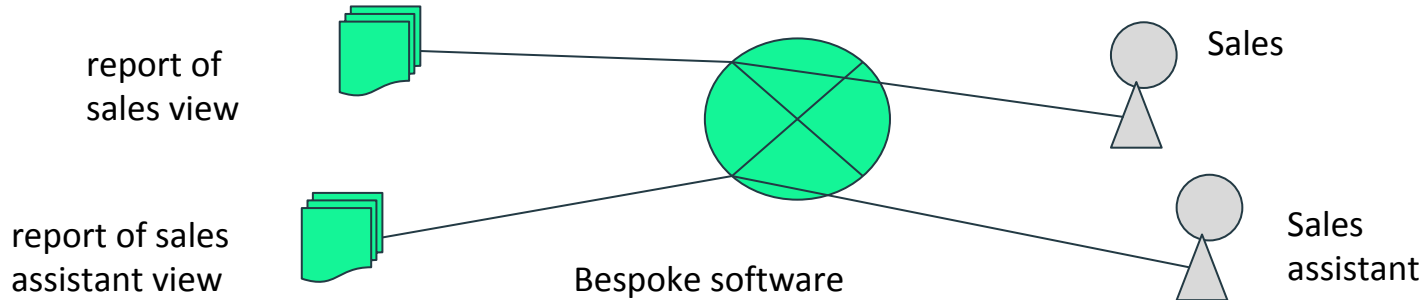

- The BI team has to generate multiple versions of the report manually.

# Solution: Data authorization is done by the bespoke software

- Bespoke software provides different report for different users based on their authorizations. .

# Problem: javascript modification error

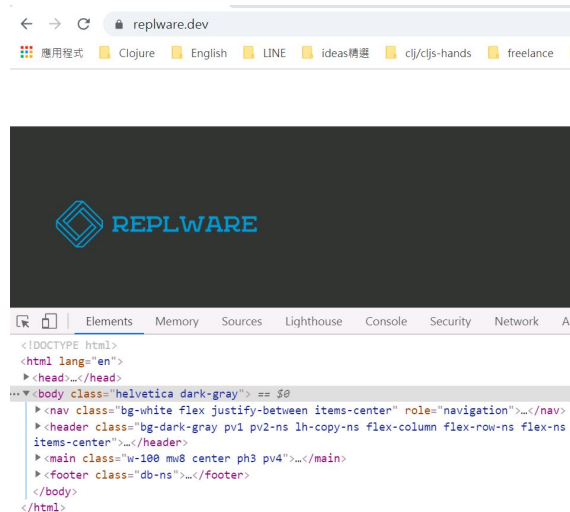

- Your customers need to embed certain javascript tags in their websites.
- They need to do certain small modifications, but they tend to make mistakes.
- Your team spends a lot of time helping your customers to write down the correct javascript tags.

# Solution: form-based generator

- Demo <https://cvtag.replware.dev/>
- Give your customers a **form-based generator** to generate their customized javascript tags.

# Problem: Your team spends a lot of time to help your customers debug

- Sometimes, your customers' websites have bugs.
- Your team opens the Chrome debugger to help them debug.

## Solution: The bespoke Chrome extension guides your customers to debug.

- You provides the **bespoke Chrome extension**.
- Now, your customers can help themselves to find out why the js tags does not work because the Chrome extension will guide them to debug.

# The value my clients got

- A reduction of manpower in processing BI report: from 4 people to 1 person.
- A reduction of overall BI report processing time: from 3 days to 1 day.
- A 80% reduction of the time to draw the graph from the BI report data.
- Elimination of the manual work to keep multiple versions of the BI report.
- Improved information security.
- Improved service quality on helping customers to embed javascript tags.
